

HBE Shelf Life and Lot Numbering

A common question about Canusa's HBE and Liquid Epoxy Type products relates to shelf life & lot numbers. Since the base and cure sides are kept separate, they tend to be very stable products. Therefore, when stored as recommended by Canusa-CPS, the shelf life is 3 years from date of manufacture (with exception to HBE COLD Weather which has a shelf life of 6 months and Liquid Epoxy Type P Base has a shelf life of 18 months). For lot numbering, the following has been excerpted from Canusa's Identification and Traceability ISO manufacturing procedures.

The **Base and Cure** QA reference lot number found on all HBE packages, is an 8 digit number:

1	14	01	084
Blending Cell	Year	Month	Batch

For example: 11401084 is from blending cell 1, made 2014, January, 84th batch in the month

For detail on HBE storage conditions please refer to Canusa's product data sheets at www.canusa.com. Please contact your local Canusa-CPS representative for further questions or clarification or email info@canusacps.com.

Since 1967, Canusa-CPS has been a leading developer and manufacturer of specialty pipeline coatings for the sealing and corrosion protection of pipeline joints and other substrates. Canusa-CPS high performance products are manufactured to the highest quality standards and are available in a number of configurations to accommodate many specific project applications.

The technical information shown here is intended as a guide for standard products.

Consult your Canusa representative for specific projects or unique applications.
